

JLG Forklift Part

JLG Forklift Part - In the late 1960's John L. Grove, with his wife Cora started out on a cross country trip in their RV. Freshly retired, after spending many years working with his brother to build their crane company into an industry leader, John had no idea that important trip would permit JLG Industries, Inc to emerge. The world leader of mobile aerial work platforms and precision materials handling equipment was the end consequence of a road trip.

All through their trip, John reacquainted himself with past business associates along the way. In combination with these conversations and a significant event; two workers were tragically electrocuted on scaffolding when the Groves were passing through the Hoover Dam. John uncovered a vast market for a product that could swiftly and safely lift individuals in the air to accomplish maintenance and other building functions.

Upon returning from their travels, John formed a joint venture with two friends and purchased a metal fabricating company in McConnellsburg, Pennsylvania. In 1970, starting operations with a crew of twenty employees, they built and sold the first JLG aerial work platform. The business incorporates many of the basic design elements of that original lift into existing designs.

Since then, JLG Forklifts have come a great distance from when Mr. John L. Grove returned from his fatefull cross-country trip and since the first JLG aerial platform entered the market. As of today, the business has expanded itself into quite a few global markets and continues to develop new machinery to guarantee that clients are able to become safer and more efficient within their workplace.
